Subject: Monroe School District: SVEC PCB lights

Good Afternoon,

I wanted to update and discuss the remediation of the light fixtures at SVEC. As indicated in our work plan, we have scheduled dates that require light fixtures to be cleaned by July 15th and testing to be conducted by July 31st for PCBs.

At the time the work plan was developed, we intended to clean the existing light fixtures and the fixtures would still be utilized within the building. However, as we continue to investigate these concerns and new data and information is available, we have slightly modified our work plan.

Monroe School District is going to be replacing the light fixtures that have not been previously updated within Sky Valley Education Center. We are currently working with a lighting engineer at McKinstry for fixture replacement. They have conducted a lighting survey and estimate a proposal next Friday. The work anticipated will be completed by the August deadline as specified within the work plan previously submitted.

The purpose of this email is to potentially wait on the PCB air testing in the space until the new light fixtures can be installed. We can removed the light fixtures prior to the deadline and perform the testing, but this would add additional work while taking away resources to perform other work at SVEC. We fully anticipate completion by the August deadline as specified, but were hopeful there may be a possible extension on the testing.

Please share with me any definitive answers or concerns.

--
